#### Oracle JDeveloper 11g (Build 5188)

You must accept the OTN License Agreement for JDeveloper to download this software.

O Accept License Agreement | O Decline License Agreement

#### 

The Studio Edition for Windows is the most popular download of Oracle JDeveloper. It contains all the features of the product - including ADF, J2EE, UML, Database, Java, and XML. This download includes JDK 6 and is supported on Windows Vista, XP, 2003 and 2000.

Install Type	Studio Edition	Java Edition
	This download is the complete version of JDeveloper with all the features.	This download contains only the core Java and XML features, it doesn't contain J2EE, ADF, UML and Database features. Fewer features means smaller
	This is the recommended Download	download and improved performance.
Windows Install For Windows XP, 2003, 2000 (includes JDK 6)	<b>∮</b> jdevstudio11110install.exe (751 MB)	
Linux Install (includes JDK 6)	<b>∮</b> jdevstudio11110install.bin (758 MB)	
Base Install For all the platforms (without JDK 6)	<u> </u>	➡jdevjavabase11110.zip (55 MB)

When used together, JDeveloper and ADF combine to provide an extraordinarily productive development environment for creating open and standards-based web, desktop, and mobile applications for the enterprise.

Integrated development environment (IDE) for Java, XML, and SQL. Requires Application Development Framework Runtime for development and WebLogic Server for integrated testing and debugging.

#### Description

Productive framework for Java EE application development. Required by JDeveloper Studio IDE.

Can also be installed into an existing WebLogic Server installation.

#### Description

Implements JEE technologies, Web services, and other leading Internet standards, to provide a reliable framework for highly available, scalable, and secure applications.

Complete WebLogic Server JEE5-compliant Java application server. Does not include administration tools and add-on technologies.

For development, also select Configuration Wizard and Upgrade Framework, which is required to create WebLogic domains.

#### Description

A Web browser-based, graphical user interface used to manage a WebLogic Server domain.

#### Description

Tools for creating WebLogic domains and domain templates, and upgrading domains created for previous WebLogic releases.

#### Description

A collection of JDBC Drivers and tools that can optionally be used to connect to a database and troubleshoot database connections. Supported databases include DB2, Informix, Oracle, SQL Server, and Sybase.

Thin client jars required to connect a remote client to a WebLogic server, including RMI clients, WSEE clients, and JMS clients.

JDeveloper 11g (11.1.1.0.1) Studio Edition - 11.1.1.0

### ORACLE

## **QUICKSTART**

These QuickStart links are provided to help get you started with your installed Oracle products.

Windows users will also find useful shortcuts in the Start Menu, to create domains, start servers, relaunch QuickStart, and more.

#### 🛬 🛛 Launch Oracle JDeveloper 11g

Start the JDeveloper development environment where you can rapidly build and test applications using a wide array of standard and open source technologies.

#### Configure domains for Oracle ADF.

Launch the WebLogic Configuration Wizard, which assists with configuring a new or existing domain for running Oracle ADF applications.

#### Access Oracle JDeveloper 11g documentation online Review our online documentation to learn more about JDeveloper, ADF and WebLogic Server.

#### Upgrade domains to version 10.3

Launch the domain Upgrade Wizard, which streamlines upgrade of WebLogic Server 6.1, 7.0, 8.1, 9.1, 9.2 and 10.0 domains.

#### Access documentation online

Review our online documentation to learn about BEA products and what's available in this release.
